

# Mosquito Workbook

## Introduction

The activities and experiments in this workbook reinforce the topics discussed in the Life Cycle MOSQUITO school presentation.

- Print out and make copies of any worksheets and use for classroom assignments, homework, extra-credit assignments or just for fun.
- The worksheets are designed to reinforce the Oregon Department of Education Science Content Standards.
- The files on the web site folder are organized by grade level. The first number in the file name is just to organize files so windows users can view a list. It is not necessary for students to complete the worksheets in a particular order.
- If you feel your students would benefit from using the worksheets from a lower or higher level, please feel free to do so.
- There is a "Teacher's Copy" for each that includes answers, explanations, and content standards that the particular worksheet reinforces.
- Note that some activities are 2 pages long so they have 2 PDF files and the Teacher's copy.
- Many of the activities can be used without a Life Cycle Kit, but the experiments do require one. The file located in the introduction folder labeled "Life Cycle Kit" shows all the components of the Life Cycle Kits.

### **Note About Oregon Science Content Standards**

Oregon Department of Education Content Standards precedes each grade level of activities.

### **Acknowledgements**

This curriculum (including all artwork) was developed and designed by Eric Engh, Education Program Specialist, Marin/Sonoma Mosquito and Vector Control District. Many employees helped with this project. Eric Engh gave Clackamas County Vector Control permission to use these resources. We are indebted to him for this great resource. We have modified some areas to best meet the goals that CCVCD has set forth for its' educational outreach program, and the State of Oregon Science Standards.
