

# Dedication

This curriculum is dedicated to the students and educators of Clackamas County, Oregon, who inspired its creation.

Written, designed, and produced by  
Rick Reynolds, M.Ed.

# Contents

## **Introduction – 6**

## **Lesson 1: Investigating the Mosquito Life Cycle – 11**

“Life Cycle of a Mosquito” activity – 17

## **Lesson 2: Staying OUT of Mosquito Food Webs – 20**

“Staying OUT of Mosquito Food Webs” activity – 27

## **Lesson 3: Adaptations of a Bold Blood Sucker – 30**

“Beware of Mosquitula” poster / activity – 35

## **Lesson 4: Various Vectors: Ticks, Fleas, and More—Oh My! – 36**

“Compacting Disease Vectors” activity – 41

## **Lesson 5: Outbreak! Vector-Borne Diseases + Epidemics – 42**

## **Lesson 6: Mapping Mosquito Habitats – 48**

Create a Custom Map with ArcGIS Online – 54

## **Lesson 7: Community Presentations + Engagement – 55**

Presentation Rubric – 59

## **Glossary – 54**

## **Youth Permission and Waiver Form – 58**

## **Student Feedback Form – 59**

Students observe mosquito larvae.

# Introduction

## *Fight the Bites! Investigating Mosquitoes + Other Disease Vectors*

**Vectors** is designed to engage students in enjoyable hands-on science inquiry about disease vectors and how to stay safe from them. Each lesson in the curriculum is aligned to the Next Generation Science Standards (NGSS) and Common Core State Standards, and care was taken to integrate art and other content areas, as well, in a wholistic approach. They can be adapted to meet the needs of learners in grades K–12 through the support of hands-on Life Cycle Kits including live mosquito larvae available free from Clackamas County Vector Control District (CCVCD). Numerous adaptations/ extensions are included in each lesson that can help you tailor them for your students.

**“Mosquitula” with a free Life Cycle Kit**

## **Clackamas County Vector Control District’s Education Program**

CCVCD supports a comprehensive vector education program for grades K-12. It is a collaborative effort between District staff, outside professionals, state and local agencies, and school educators. Serious vector-borne diseases such as West Nile virus have been spreading into Oregon, and our students and families need to understand why this is happening and how to protect themselves.

Education is an integral part of the Integrated Vector Management Program utilized by CCVCD. We believe that local mosquito control starts with the citizens of Clackamas County in their yards and neighborhoods. Armed with knowledge of mosquito and other vector biology, informed citizens know what actions they can take to suppress the populations of disease vectors.

## **Free Classroom Resources**

CCVCD staff are pleased to be able to support educators and students with hands-on resources including mosquito larvae in safe emergence cages, macro lens magnifiers, pipettes, and more, as well as visits by biologists and other experts. Interactive multimedia presentations can be shared with students, in addition to the activities, or educators can download the presentations and other resources from our website at [fightthebites.com/education](http://fightthebites.com/education). We seek to inspire students to think critically about mosquitoes and other potential disease vectors, including their fascinating life cycles and adaptations, and we appreciate you joining us in this important collaborative effort!

Each class keeps a Life Cycle Kit for about two weeks. It contains learning tools that allow students to actively study the biology, ecology, and control of mosquitoes. Students are able to safely observe the metamorphosis of mosquito larvae into pupae and then flying adults. Mosquito fish (*Gambusia affinis*) may also be included so students can study the effects of a biological control.

Educators are provided with supplemental resources, including this teacher's guide with suggested lesson procedures, experiments, simulations, and other guided activities that

reinforce key concepts. Students are also provided with information to take home, including CCVCD contact information and our services that are provided free of charge.

### Objectives of CCVCD's Education Program include:

- Students demonstrate understanding of mosquito life cycles and that mosquitoes require water to develop.
- Students can explain that some mosquitoes and other organisms can transmit certain diseases to people and other animals.
- Students can explain verbally and in writing how they can help in the fight against mosquitoes by dumping standing water and educating others about mosquitoes.
- Students demonstrate skills such as careful observation, scientific illustration, data recording, data analysis, graphing, and written/oral expression.

Our education program also aims to increase student STEM and language skills, including:

- Making and recording observations
- Classifying information
- Measuring and counting
- Stating and testing hypotheses
- Describing observations
- Explaining reasoning verbally and in writing
- Identifying and expressing responses to science-related questions
- Using technology as a productivity tool and to enhance learning
- Working in teams to solve problems and
- Critical listening and reading.

Students are encouraged to ask questions, brainstorm solutions, gather information, analyze and interpret data, and communicate their discoveries. They often work in pairs or small groups. These learning styles enhance understanding, cognitive skills, and social skills. Developing these skills in our

students is essential for an adult citizenry literate in science and for attracting students to professional work in the sciences.

## Lesson Plan Format

Each lesson has the following sections:

- Overview
- Lesson Goals
- Objectives
- Alignment to Standards
- Materials + Preparation
- Suggested Procedure
- Adaptations / Extensions
- More Resources / References

The lessons also include a text box that lists subjects covered, the suggested grades to which the lessons can be adapted, the average duration of the lesson, and vocabulary words which are explained in the lesson and in the glossary at the end of the guide.

Materials meant for teachers all begin with bold-face headers in **white**. Handouts and other materials meant for students all begin with a large, bold-face header in **blue text**. An exception is the glossary, which is a resource for both teachers and students.

**Subjects:** Science, Math, Reading, Writing, Speaking & Listening, Art, Health, Social Studies

**Grades:** Adaptable for K–12

**Duration:** 30–50 minutes

### Vocabulary

- Hypothesis
- Larva / larvae
- Life cycle
- Metamorphosis
- Pupa / pupae
- Scientific method
- Vectors
- Vector-borne disease

## Alignment to Standards

*Fight the Bites!* need not compete with core curriculum for classroom time. Instead, it can help teachers cover core concepts and improve student skills by using hands-on materials and field study in local areas. To help teachers identify the ways in which the lessons can be used to meet their curriculum requirements, each lesson is correlated to standards. A chart like the one below is included in each lesson plan which lists the standards met.

Standards		Middle School (Grades 6-8)
Next Generation Science Standards (NGSS)	Crosscutting Concepts	<ul style="list-style-type: none"> <li>• Structure and Function</li> <li>• Stability and Change</li> </ul>
	Science & Engineering Practices	Obtaining, Evaluating, and Communicating Information
	Disciplinary Core Ideas	LS1.A: Structure and Function LS1.B: Growth and Development of Organisms
Common Core State Standards	Speaking & Listening	1, 2, 4, 6
	Language Standards	1, 2, 3, 6
	Writing Standards Science & Technical Subjects	4, 7, 10
	Math Geometry (Grade 5)	1, 2

Numbers and letters listed for NGSS and Common Core standards correspond to those in the respective sections of the standards. Lessons are designed to meet multiple standards, but due to space considerations, those listed may not be completely comprehensive. We encourage you to reinterpret standards and lessons and adapt them to meet their educational objectives and particular standards. The NGSS standards are at [nextgenscience.org](http://nextgenscience.org) and Common Core State Standards are at [corestandards.org](http://corestandards.org).

## FREE Video Games, Books, Posters, Training, and More!

- The **“Fight the Bites!” video game** teaches students ways to stay safe from mosquitoes while they explore “Clackamas Land.” It is an action-adventure storybook, in which students help silly and surprising characters. They can play individually or with a partner using almost any computer, tablet, or smartphone. Learn more and download the game for iOS, Android, Windows, or Mac at [fightthebites.com/education/new-fight-the-bites-video-game](http://fightthebites.com/education/new-fight-the-bites-video-game).
- **Vera vs. Vectors + Viruses** in an interactive book that lets students explore science phenomena and learn ways to stay safe from disease vectors like ticks, fleas, flies, and mosquitoes. Optional narrations are provided to help engage students and support emerging readers. The final screen summarizes student achievement for easy assessment. Learn more at [fightthebites.com/education/vera-vs-vectors-viruses](http://fightthebites.com/education/vera-vs-vectors-viruses).
- The **“Beware of Mosquitula!” poster** describes fascinating mosquito adaptations and how to stay safe from the real-life blood suckers. Contact CCVCD if you would like one or more copies of the poster.
- **Beware of Mosquitula!** and **Mosquitula Meets the Great Gambusi** are children’s books that engage all ages in learning about mosquitoes, mosquitofish, and ways to keep ourselves and our environment healthy.

Please let us know if you would like the resources listed above, hands-on training, and/or a Mosquito Life Cycle Kits. Contact us at 503.655.8394 or via the form at [fightthebites.com/service-request](http://fightthebites.com/service-request).

Thank you for partnering with us to keep our students safe from vector-borne diseases while helping them develop skills in science, language arts, math, art, and more.

In appreciation for all you do,

Rick Reynolds, M.S.Ed. and CCVCD

# Thanks + Appreciation

The author wishes to thank everyone who has provided valuable feedback, expertise, and testing of the lessons and activities, as well as supported our training and outreach efforts, especially:

- ★ Angela Arends, STEM Consultant, Clackamas Education Service District
- ★ Susan Ariola, Corinna Cho, Heather Gomez, Alison Hansell, and Gretchen Rowland-Horrigan, Teachers, Oregon Trail Elementary, Happy Valley, OR and their enthusiastic students
- ★ Michael Bondi, John Borden, Christine Cannon, Dan Green, Lowell Hanna, Dakota Hufford, Sarah Present M.D., Michael Shaw, and Amber Winsatt, current and former Board of Trustees, Clackamas County Vector Control District (CCVCD)
- ★ Bob Carlson, retired Director, Center for Research in Environmental Sciences and Technologies (CREST), West Linn-Wilsonville School District
- ★ George Cashdollar, retired Biologist & Educator, CCVCD
- ★ Anton Clifford, Science Teacher, Clackamas High School, Clackamas, OR
- ★ Eric Eng, Education Specialist, Marin / Sonoma Mosquito & Vector Control District
- ★ Josh Jacobson, Executive Director, CCVCD
- ★ Christy Kelley, Science Teacher, Rock Creek Middle School, Happy Valley, OR
- ★ Jennifer Lau, 3<sup>rd</sup> Grade Teacher, Gaffney Lane Elementary School, Oregon City, OR
- ★ Phil Marchant, Science Teacher, Milwaukie High School, Milwaukie, OR
- ★ Janet Nagele and Rodrigo Corona, Oregon State University (OSU) Ext. Service, Clackamas County
- ★ George Peck, former Executive Director, CCVCD
- ★ Megan Sternberg, Science Specialist & Instructional Equity Coach, North Clackamas School District
- ★ Theresa Micallef, Office Manager, CCVCD
- ★ Lucinda Watson and Angie Markman, 2<sup>nd</sup> Grade Teachers, River Grove Elementary School, Lake Oswego, OR and their enthusiastic students
- ★ Pat Willis, OSU Ext. Service & 4-H Youth Development
- ★ The wonderful youth in OSU Ext. Service/4-H programs in Molalla, OR

These resources would not have been possible without the support of the experts above and many others, including their colleagues at the following partner agencies and organizations:
